HEAVY DUTY BUS TUBS

Heavy duty bus tubs are made from rugged, extremely durable polyethylene and are molded at twice the thickness of a standard bus box. They feature more reinforcing ribs under the rim than other brands. These ribs add more strength to reduce twisting, bowing, and tearing. The four stacking lugs prevent sticking when nested.

Heavy duty bus tubs also feature re-curved handles molded into the box. They are designed for maximum comfort, efficiency, safety, and ease of use, especially in the work place. This ergonomic feature reduces stress on the fingers and hands while lifting heavy loads.

Heavy duty bus tubs incorporate a textured outer surface which resists marring for a long and attractive service life. Thicker plastic corners reduce the possibility of wearing holes in the bottom, extending the life of the tub. The inner surface of tub is very smooth with a wide radius for easy cleaning.

Heavy duty bus tubs come standard in 5 or 7 inch depths. They may be used for busing, storing, or transporting. They are available in black, brown, or grey. Optional contoured lids provide for boxes to be stacked on top of one another without leaning or collapsing.

The heavy duty bus tub is manufactured from FDA approved resins and is also dishwasher safe.
