

BĀKALON Pans

Chicago Metallic BĀKALON Pans are hard anodized aluminum pans that provide optimal strength, durability, and thermal conductivity. This ultra-hard, aluminum oxide surface provides a nearly permanent protective dark gray cooking surface that will not chip, peel, rust, or interact with food. In fact, these pans are so durable that some bakers have experienced over 50,000 bakes.

Second Only to Diamonds

Through an electro-chemical process, our BĀKALON pan surfaces react to form an ultra-hard and durable oxide layer that resists abrasion and corrosion. In fact, the surface hardness of our BĀKALON pans is second only to diamonds, which makes it the most durable pan surface you can buy.

Perfect Bake

A perfect bake can be achieved every time since the dark surface of hard anodized pans provides quick and even heat distribution. Bakers can achieve faster bake times at lower temperatures versus plain aluminum pans, ultimately lowering energy consumption and eliminating soggy crusts.

Unparalleled Releases

BĀKALON pans pre-seasoned with Chicago Metallic's proprietary AMERICOAT® ePlus silicone release coating offer exceptional ease and convenience, combining the release characteristics of a non-stick coating with the flexibility to use metal utensils.

Easy Clean-Up

Using proper seasoning techniques, or buying pre-seasoned pans and using a little oil will keep food from sticking and make clean-up a snap.
