**CABINET CONSTRUCTION**

Exterior construction includes heavy-duty stainless steel finish on front, sides, top, door(s) and grille. Removable hoods and insulated lid assemblies are made of matching stainless steel. Cabinet back and bottom are constructed of galvanized steel. Interior liner is made of aluminum for superior resistance to corrosion.

Cabinet insulation is CFC free foamed-in-place polyurethane of two-inch minimum thickness. Six-inch casters, 2 with brakes, are standard. Legs are available as an option.

Composite cutting board supplied with cabinet is 10" wide. It is readily removable for cleaning. Two epoxy-coated steel wire shelves per section are supplied as standard. Pans furnished are 4" deep and made of polycarbonate plastic.

**DOOR CONSTRUCTION**

Doors are mounted to face of cabinet on cartridge style hinges permitting them to self-close under their own weight. Hinges also allow doors to stay open 120° and permit easy door removal for service and cleaning if required. A plug in type vinyl magnetic gasket is attached to each door for positive seal. Door handle contoured to permit easy opening of doors with fingers from both top and bottom of handle.

**REFRIGERATION SYSTEM**

More robust refrigeration system provides added capacity and efficiency. Systems are designed using CFC free R134a refrigerant and expansion valve between condenser and evaporator. Recirculated, forced air from evaporator is moved under pans, which are recessed 2" from top of cabinet. Forced air over the condenser is drawn through grille under door as well as the back and bottom of cabinet. Automatic condensate evaporator is provided to eliminate the need of floor drains.
